POWERCO

DP-0014

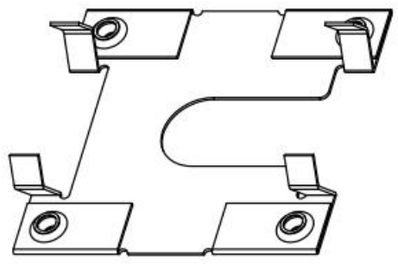

Designed to connect the panel frame to the mounting system, establishing an electrical path fc effective grounding protection. Suitable for various rooftop and ground-mounted photovoltaic systems. It ensures low-impedance conductivity, offers easy installation, and provides reliable grounding.

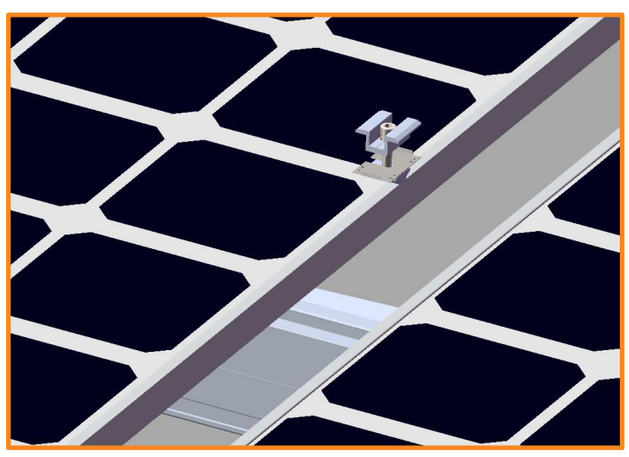

Application	Panel frame to structure grounding
Key Features	Reliable Grounding – Provides low-impedance connection between panel frame and structure for electrical safety. Penetrating Design – Bites through surface oxidation to maintain consistent conductivity. Compact & Lightweight – Small size allows easy installation in tight spaces.
Specification	Anodizing treatment 10μm
Material	SUS304
Color	Silver
Warranty	10 years and 25 years service life

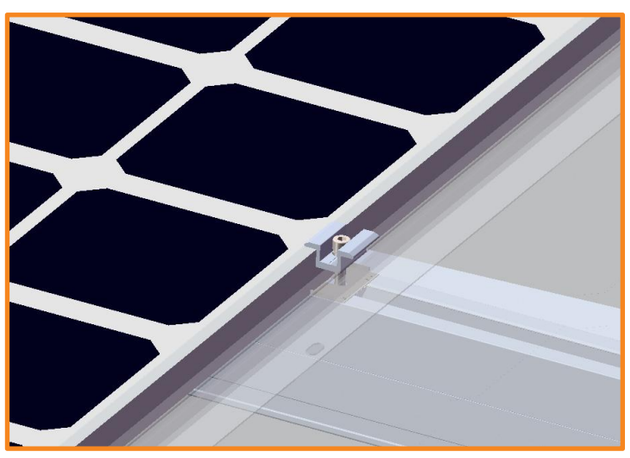

Material:SUS304

Secure Fit

Clips firmly onto panel frame without loosening over time.

Corrosion-Resistant Material

Made from stainless steel for long-term outdoor durability
