RH-304-0001+FA-0127

Hooks are used to secure rails to the tile roof and are a key component connecting the roof to the support system. Wood screws then lock the hooks into the roof purlins, providing a stable anchor point for the entire system. They are widely used in residential and commercial photovoltaic projects with various tile roofs.

Application	Pitched Rooftop
Key Features	Secure Roof Attachment – Hook firmly grips roof tiles while wood screw anchors into structural timber. Corrosion-Resistant –stainless steel ensures long-term outdoor durability.
Specification	Anodizing treatment 10μm
Material	SUS304
Color	Silver
Warranty	10 years and 25 years service life

High Load Capacity

Provides strong and stable support for the entire solar array.

Versatile Compatibility

Suitable for most common tile types and wooden roof structures.
